We have worked with hundreds of private and public sector organizations to identify and implement game changing strategies that deliver predictable savings, sustainable results and a clear return on their investment.

OUR APPROACH

We begin by developing a comprehensive understanding of each client’s needs and conducting an in-depth analysis. We combine these findings with our expertise across the spectrum of advanced fuels and vehicle technologies to pinpoint the best solution.

OUR SERVICES

Analysis, Planning & Program Support

As part of our analytics-led approach, we can temporarily install data logging equipment into selected vehicles and benchmark your operating data with similar fleets. We’ll also analyze how various fuels and technology options would perform and compare costs and environmental outcomes. Once our recommendations are made, we’ll work closely with you to ensure that the implementation process is seamless. In addition, we’ll provide ongoing support as well as recommendations on future advancements in fuels and technologies that are right for you.

Funding

Since 2008, we’ve secured $100+ million in competitive grants from funding sources for our members and clients. We’ll work on your behalf with Ohio-based and national foundations, non-profits and organizations to identify opportunities and can write the applications and secure the funding for you.

We offer flexible pricing based on a percentage of the funding, plus a small upfront fee, or pay-per-service at a proposed rate.
**Fleet Training**

Does your staff need training on vehicle maintenance, data capture, efficient driving, or other topics? We’ll customize a training program to meet your specific needs. We’ll also keep you up-to-date on other topics to ensure that your team remains current.

**Ohio Green Fleets**

We recognize fleets for their success through our acclaimed Ohio Green Fleets program. This program, which was created in cooperation with the Ohio EPA and the U.S. EPA, incorporates three levels of certification through a five-star rating system.

Once your fleet is certified, we’ll help promote your accomplishments to your customers and an even broader community.

**BENEFITS**

- Cost-effective consulting fees that are designed to meet the needs of any project, regardless of size or scope
- 20+ years of experience in advanced fuels and vehicle technologies
- A track record of successful consulting engagements and deployments
- Unbiased, objective recommendations based on in-depth analysis rather than an off-the-shelf solution
- Comprehensive, flexible services
- Recognition for your achievements
